Project Focus

To decrease negative behaviors by adding sensory strategies used in independent stations and small groups
We do not have any audio books in library. They will build auditory processing, vocabulary and comprehension as
To encourage students to read current print materials. Magazines are a great way to expose students to a variety
To add digital photography to the curriculum to stimulate interest and teach students skills when they are young

Enhancing the curriculum to provide more visuals and specimens. Many students are interested in marine biology
Teaching airbrushing will let the students go into careers such as painting cars, tattoos, technical drawings etc.
Allow students to perform experiments that they have not been able to do because of lack of protective clothing

To improve the makerspace resources which benefit both the middle and high schools

; well as increase the desire to read or learn to read
